SUMMARY

Backend-focused Full-Stack Developer (1.5+ yrs) building production systems for a service marketplace platform — API architecture, multi-gateway payments, and observability — on lean, cost-conscious infrastructure. Currently leading a multi-tenant AI chatbot SaaS from the ground up. Core stack: Node.js/Express, Next.js/React, PostgreSQL, Redis, Qdrant, Docker.

WORK EXPERIENCE

Full-Stack Developer | Techmasworld Infotech Pvt. Ltd. May 2025 - Present

- Own backend architecture, API design, and infrastructure decisions for a service marketplace platform (Next.js, Node.js, PostgreSQL) serving 25k+ daily requests on a cost-constrained single-VPS deployment (Nginx, Docker), within a lean 2-3 person team.
- Designed and integrated a multi-gateway payment layer (PhonePe, Razorpay, PayPal) into customizable e-commerce modules, along with Shiprocket logistics integration, analytics dashboards, and admin tooling — built to support merchant-specific configuration without code changes per client.
- Introduced observability into the marketplace platform by standing up Grafana and Prometheus on the production VPS, giving the team visibility into service health and request patterns that didn't exist before.
- Leading development of a multi-tenant AI chatbot SaaS (pre-launch) — architecting knowledge-base integration and embeddable script support for client websites from the ground up.

SKILLS

Languages	TypeScript/JavaScript, Go, Python, SQL
Backend	Node.js, Express.js, tRPC, Prisma, PostgreSQL, Redis, BullMQ, MongoDB
AI/ML	OpenAI, Anthropic, Gemini APIs, Qdrant (Vector DB), RAG/Agentic Pipelines
Frontend	React.js, Next.js, TailwindCSS, Zustand, React Query
DevOps/Tools	Docker, Nginx, Git, GitHub Actions (CI/CD), Grafana, Prometheus, Postman, Linux, VPS Hosting

PROJECTS

Weave — Multi-Provider AI Agent SDK GitHub | weave.sundaramsingh.com

- Built a TypeScript AI agent SDK with a runtime state machine, multi-agent handoffs, and a 3-tier memory system (factual, episodic, session) with automated context pruning.
- Engineered an extensible guardrails engine with prompt-injection detection, PII redaction, tool-boundary enforcement, and LLM-based policy classification to control agent/tool execution.
- Designed a provider-agnostic LLM layer supporting OpenAI, Claude, and Gemini with automatic failover and structured-output validation with schema-based self-repair.
- Developed and deployed production documentation and a public landing page, enabling external developers to evaluate and integrate the SDK.

Nodebase — Workflow Automation Platform GitHub | nodebase.sundaramsingh.com

- Engineered a full-stack workflow automation platform using Next.js, TypeScript, tRPC, and PostgreSQL, with typed APIs and persistent workflow state.
- Built a React Flow-based drag-and-drop workflow builder, translating visual node graphs into executable trigger-action pipelines.
- Designed a unified event-driven execution engine supporting Google Forms, Stripe webhooks, and manual triggers for workflow dispatch.
- Implemented session-based authentication and multi-tenant isolation with Better Auth and Prisma, enforcing tenant-scoped workflow and execution data access.
- Structured workflow execution as stateless, independently executable jobs, enabling migration to queue-based processing with Inngest as workload increases.

Noetalm — Grounded AI Research & Synthesis Platform GitHub | noetalm.sundaramsingh.com

- Built a 4-stage agentic RAG pipeline (query rewriting, HyDE, Qdrant vector recall, LLM reranking) for high-precision retrieval over user documents
- Designed a 3-tier multi-provider LLM router (Gemini, OpenAI, Anthropic) with automatic fallback and inline source citations to ground outputs and reduce hallucination
- Engineered an async multimodal ingestion pipeline (BullMQ, Redis) parsing PDFs, DOCX, and YouTube video/playlists into chunked, embedded vector data
- Built the backend on Express, TypeScript, Prisma/PostgreSQL, and Redis, with a rate-limiter middleware protecting the API

EDUCATION

Mumbai University <i>MCA — Pursuing (3rd Semester)</i>	Distance Education Program(CDOE) <i>2024 – 2026 (Expected)</i>
Mumbai University <i>B.Sc. in Computer Science — Avg. CGPA: 9.83</i>	B.K. Birla College, Kalyan <i>2022 – 2025</i>
Maharashtra State Board <i>Higher Secondary Certificate (Class 12) — 82%</i>	Balashaheb Mhatre College of Science & Commerce, Badlapur <i>2020 – 2021</i>
